Communication Boards

Material Choice

Foamex

Foamex is a superior quality, extremely versatile PVC foam sheet that is extremely popular for use in signage.

It is easy to work with and can be nailed, screwed or riveted to surfaces with ease.

It can also be mounted with double sided sticky pads for easy removal.

It is softer than Dibond, has no sharp edges and is suitable for indoor and outdoor use.

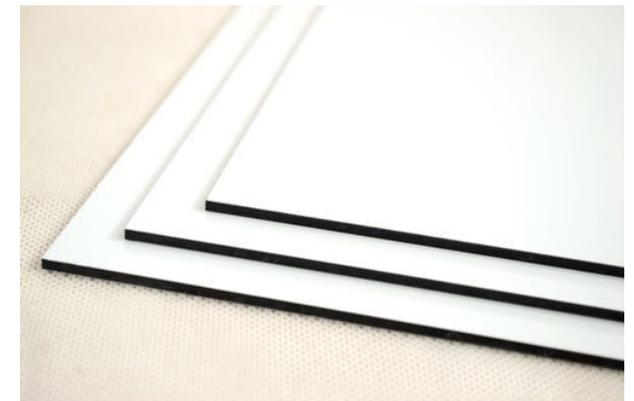

Dibond

Dibond consists of two thin sheets of Aluminium enclosing a Polyethylene core.

Suitable for a vast range of applications, they are lightweight but strong and the extremely flat surface is great for printing high quality graphics or text.

Dibond can be nailed, screwed or riveted to surfaces with ease and can also be mounted with double sided sticky pads for easy removal. Harder wearing than Foamex and suitable for indoor and outdoor use.

A very popular choice for communication boards due to its hardy nature.

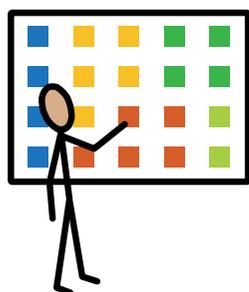

Bespoke Widgit Symbol Signage

www.widgit.com/signage

Our highly experienced team can design, print and deliver symbolised signage in a range of sizes for easy self-installation.

We offer a bespoke design service for all non-standard communication boards, and a wide range of door and navigation signs.
